GIS Users Group Meeting Notes

Wednesday, October 28th, 2020 – 2:00 PM

WebEx

- **Tom Dobbs - Welcome**

Presentations

- **[Mobile Applications for Emergency Management](#) - Raquel Bensadoun**

  o Broward County currently has an Explorer application, a Collector application, and a Survey123 used to track coronavirus business complaints, field inspections, and business closures. Each of these applications are configured in different manners and pose unique limitations in data collection, data editing, and display. These applications have allowed for increased enforcement and tracking during the novel coronavirus pandemic and better situational awareness.

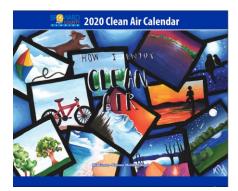

- **[City of Plantation Public Works](#) – Allison Jirout**

  o The City of Plantation Public Works Department has built a georeferenced public works asset management system from scratch utilizing fieldwork, LiDAR, and satellite imagery to capture everything from street signs to infrastructure. This presentation focused on the process from inception to production.

- **[Hub Initiative: 2022 Clean Air Calendar](#) – Monica Ospina**

  - Each year, Broward County students are asked to create artwork and submit a paragraph regarding an environmentally focused topic. Calendars are printed and distributed to Broward County residents and employees. To enhance and streamline the annual Clean Air Calendar Poster Contest, a [GIS Hub Site](#) was created. This site is a repository for all the information students in Broward County need to participate. If you have an outreach initiative that you want to promote, a Hub Site is a fantastic resource. The Air Monitoring & Outreach team has done an exceptional job engaging students across the county and this website is a phenomenal example of how to use Hub Sites for outreach initiatives.

- **Community Analyst – Stephanie Delgado**

  - [Community Analyst](#) is an easy to use tool for creating infographics and reports - fast. With highly detailed information available from ArcGIS online as well as their [data partners](#), you can perform tasks as simple as creating an infographic of local demographics or as complicated as void analyses, all within the same application. This tool can be used to work on business recruitment, to find detailed demographic information, and to create aesthetically and informationally consistent infographics out of the box to the delight and surprise of stakeholders. For local data, please check the [Data Center](#).

- **[U.S. Census Bureau Data & GIS](#) – Javier Acevedo, Andrew Dietz**

  - The Demographics Team of PDMD provided an overview of finding and using U.S. Census Bureau data with GIS. The team has provided presentation notes [here](#) and a handout for navigating census data [here](#). For any additional questions or support, please reach out directly to the presenters.

All sessions in Eastern Standard Time (New York, GMT-05:00)
